FAB GOLAN '73 ERRATA

Updated as of 9/23/17

Setup

Israeli Mines the Israeli setup card says place per rule 14.11. This of course is 14.02.

Q: *Israeli setup card says Israelis start with 5 VPs; there are 6 VP locations on the map.*

A: Correct number is 6.

Israeli Units:

Q: *77/7th Armor - Unit and map say it sets up in area 47; setup card says area 52.*

A: The set up card actually says Area 42. This is correct, Nafakh. The map is correct. The sticker is wrong.

Q: *53/188th Armor - Unit and setup card say area 30; map says 31.*

A: Map is correct; set it up in 31.

Israeli Assets/Markers:

According to setup instructions, minefields are placed between areas 26/83, 51/52, and 47/50. Given that two of those sets of areas are not even adjacent, I'm confident that the minefields as printed on the map are correct: 29/30, 47/48, and 50/51.

TECHNICALLY OPEN, but I'm sure the map is right. ***Per Rick Young, go with the map if in doubt, due to renumbering map areas.***

Syrian Units:

Q: *Moroccan unit is stickered with infantry symbol; setup card shows mechanized.*

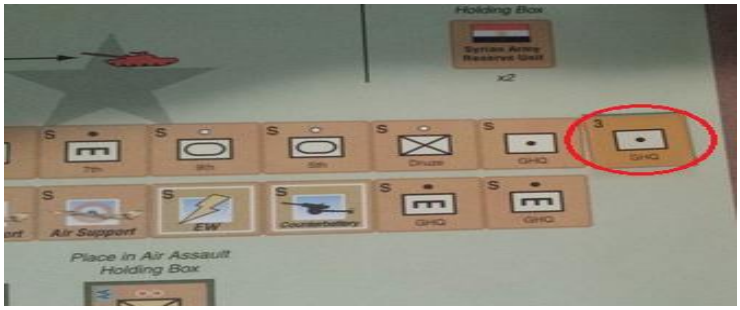

A: Unit sticker is correct; it's infantry.

Q: Area 59: Do I understand this correctly? The Syrian "Moroc" unit is treated as an INF unit. Say it attacks a "armor" Strong Point. The Modifiers would be -1 for the Assault, -3 for Terrain, and -1 for the Strong Point acting like a field works. In other words it only hits on an automatic "1" roll. Is that correct? Why in the world does the Syrian player attack this space?

A: As far as the Moroccan unit in area 59, the Syrians had to put pressure all along the border in order to split Israeli forces!

Syrian Assets/Markers:

Q: *GHQ artillery Asset (red circled) is marked to enter on turn 3; Syrian setup card shows in from Start.*

A: Setup card is correct; it's available from turn 1, at Start.

According to setup card, Syrian reserve markers start in the reserve marker holding box. According to scenario instructions, they start either on the 132 Mech and 51 Tank (historical deployment) or on two units of the player's choice (alternate setup).

OPEN, but I'm fairly sure the scenario instructions override the setup card.

Q: *Historical setup, some of the Syrian units don't match the space they are supposed to go onto the board. For example the 68th Infantry Unit has the # 57 on it, which is the Tel Hermonit (Israel_ space). The 85th has the #50 on it as the starting spot. There are a few others. I was wondering if you could give again what the historical spots are supposed to be, so I can check.*

A: The Syrian Moroc, 68, 85, 52, 33, 112 and 61 units are setup in Israeli occupied/controlled areas, for the historical scenario! The game begins with the Combat Phase, since movement is considered to have occurred.

Q: Historical Setup - In the spaces west of purple line where Syrians have penetrated, are they contested with Israeli units since the IDF must set up along purple line?

A: Yes, the Syrians have already conducted their Op Movement Phase. The seven areas in which the Syrians are occupying are contested and a combat round must be fought (with a "river assault marker), in trying to establish a bridgehead across the AT ditch.

Q: Does the "free combat Round in the Breakthrough Combat Phase of Turn 1 in any two contested areas" for the Syrian Player from the Historical Setup (22.17) also apply to the Alternate Setup?

A: No, the free combat round is only for the Historical Scenario!

Q: The Historical Scenario lists starting areas for all units except the various types of Strong Points. What should the actual, historical deployment of the various Strong Points be?

A: The Strongpoint and Ghost units are placed by the Israeli player at the player's own discretion! The only restriction is one of these per area. Most players seems to prefer to shuffle them and place them face-down so it's uncertain to both sides their actual strength!

For a rough historical setup regarding Strongpoints and Ghost units use the following (north to south):

Area/Unit

59/Rifle (Green)

57/Rifle (Veteran)

50/Tank (Veteran)

49/Ghost

48/Tank (Elie)

40/Ghost

30/Tank (Elite)

30/Ghost

29/Rifle (Green)

29/Tank (veteran)

27/Rifle (Veteran)

Strongpoints: *Hi all, Rick and I had a discussion about Strongpoints! As a result, we have decided to implement this rule as of 7/20/17:*

• Strongpoints are defensive in nature, but if the Israeli player attacks in an area with a strongpoint, the strongpoint may only participate by immediately being removed from play and replaced with the corresponding asset. This decision cannot be reversed. This asset is sent to the used box as normal if it survives the combat.

The references below are prior to the updated note above related to Strongpoints and rules change.

Q: *On strongpoints and exploitation - is eliminating a Ghost strongpoint alone sufficient to allow possible exploitation?*

A: No, exploitation is not allowed in such situations.

Q: *On strongpoints and evacuation - as written, the rules appear to be saying that ANY regular unit leaving a strongpoint's area results in the strongpoint being evacuated. Does that include Syrian units leaving - so that all the Syrians need to do (assuming they have the time) is leave an area defended by a lone strongpoint to clear it?*

A: Only if an Israeli unit leaves or retreats from a contested area occupied by a Strongpoint.

Q: *Ghost Strongpoints. I don't see any prohibition against committing assets to a Ghost strongpoint (though I may just be missing something). Is that allowed?*

A: Yes, it is allowed! Ghost units are treated just as normal units until revealed in combat. So, assets/events committed to combat against those units are placed in the Available Box when the Ghost unit is revealed!

Q: *According to the manual, strongpoints with the tank symbol get a +1 to their success number, and those with an infantry symbol get a -1. What happens with fire against them? By the rules as written, I believe they should all be treated as infantry-class units for enemy fire. For example, a veteran armored unit attacking a veteran tank-type strongpoint would have a +1 net success number. Is that correct?*

A: That is correct! -1 if a Strongpoint is target! I had this confusion slightly from the playbook examples. I think the -1 in the playbook is based on the fact that strongpoints count as infantry behind field works for to hit.

Q: *So as far as strongpoints - I think the modifiers are as follows:*

-1 SN to all fire (ground or artillery) against strongpoints.

-1 SN to strongpoints's fire if it shows rifle symbol

+1 SN to strongpoints's fire if it shows tank symbol.

A: Correct

Q: Do the 3 stars Israeli strongpoints give a victory point to the Syrians after being eliminated? Or do they not because they are treated as one step units?

A: According to 15.6, Strongpoints are one-step units (emphasis original). Thus they do not yield VP when destroyed.

Q: The Historical Scenario lists starting areas for all units except the various types of Strong Points. What should the actual, historical deployment of the various Strong Points be?

A: The Strongpoint and Ghost units are placed by the Israeli player at the player's own discretion! The only restriction is one of these per area. Most players seems to prefer to shuffle them and place them face-down so it's uncertain to both sides their actual strength!

For a rough historical setup regarding Strongpoints and Ghost units use the following (north to south):

Area/Unit

59/Rifle (Green)

57/Rifle (Veteran)

50/Tank (Veteran)

49/Ghost

48/Tank (Elie)

40/Ghost

30/Tank (Elite)

30/Ghost

29/Rifle (Green)

29/Tank (veteran)

27/Rifle (Veteran)

Other:

Assault markers, according to historical scenario instructions, are put in areas 26, 27, 39, 47, 50, 57, and 58. Based on the location of Syrian units on the map, this should actually be 27, 28, 39, 48, 50, 57, and 59.

TECHNICALLY OPEN but I'm sure I'm correct here.

Q: *EVENT "King Hassan's Troublemakers" After this event has been played, the Moroccan unit may not fire while attacking. May it be assigned as the point unit in an attack?*

A: Yes! The only restrictions is the ones listed.

Q: (Green Stripe) *Are the green stripe reinforcements in the 3rd and 4th turns bound by boundary restrictions? They can arrive in different sectors. You want to deploy them in the south sector but can only deploy one (1 pip first division), and the bigger one is stuck in the center area. I remember reading that the operational reserves aren't bound by restrictions and can combine with other higher echelons without penalty but I can't find the reference.*

A: Yes, the 1st Tank Division (green stripe) is restricted by boundary! Those units must stay in the sector in which they enter the game in! However, boundary restrictions have less effect on the units entering on Game Turn 4!

Q: *Any special rules for the Anti-Tank asset?*

A: See 13.3 (page 13). It's an infantry class battle asset. That's all.

Q: *(BREAKTHROUGH) Also, with the Breakthrough Movement Phase, an actual BREAKOUT doesn't have to occur for me to move one of my Reserve units? I'm just playing the first turn now, and didn't create any breakthrough spots during combat for the Syrians, and just wanted to make sure I could still move up my two Reserve units up to the front line? (If I can, and I add the unit to a spot that already has a Syrian unit there--already did combat in the normal phase, I don't do another round of combat do I?)*

It looks like you only get a combat round in the Breakthrough Combat Phase in a newly contested area unless you spend a Special Action. So if you cleared a space but didn't get the Exploitation, you can send the reserve on through for another combat (if it can reach anybody).

A: There are three ways to move a unit during the Breakthrough phase:

1) Achieve a breakthrough and pass a morale check so as to get marked with an exploitation marker (armor units only, allows you to move 1 area only).

2) Use a special action (armor units only, allows you to move 1 area only).

3) Place a reserve marker on the unit instead of moving during the operational movement phase (ANY unit, may move up to full movement allowance).

EDIT: and you only get combat during the Breakthrough phase if you create a newly-contested area, or you spend a Special Action for a Breakthrough Combat. (This is in addition to any SA you may have spent for option 2 above. So if you spend an SA to move an armored unit into an already- contested territory, you would not get to fight there unless you spend an additional SA.)

Q: Questions:

1. (Map) *What is the purpose of the "Net VPs Syria/Israel" , that yellow stripe at the bottom of the Turn Track? What does it mean?*

A: That's for sudden death victory (19.4)

2. *Just double checking that battle assets, all of them (including the one pip infantry & armor) are returned to the cup after battle is over.*

A: They go to the Used Box (6.29)

3. *What if King Hassan's Troublemakers is placed when the Moroc unit is already in a contested space? He just doesn't attack anymore right?*

A: I'd say taking the event at face value here makes sense - "It may only fire in defense and may not move into an enemy-controlled area, whether contested or not," seems to pretty well cover it.

Q: *SO if option 3) (reserve movement in the breakthrough space) is used, can the unit move to a space that causes a new contested battle or would that require a special action?*

A: IF the Reserve unit moves to an uncontested enemy area, causing it to be contested, THEN no special action is needed to initiate combat; it's a side effect of the move.

4. *Commando Raid assets, do they stay in a space even after I have moved a friendly unit into the space?*

A: If the commando asset is still in its target area when a Syrian unit enters that area, the commando asset is relieved and is sent to the Used Box.

5. *Mech Infantry, can or can't move across a rugged boundary?*

A: Supply may only be traced across escarpment boundaries if a road exists (14.93).

Q: *When released, can the units of the Syrian Operational Reserve (the 3rd Tank Division) be placed on the map in reserve--with a "reserve" marker? I want to release a unit using a special action during the Israeli (2nd player) admin phase, and want it to be in reserve so I can move it during the upcoming reaction phase.*

A: Sorry, no. Units can only be placed in reserve during the friendly movement phase.

Q: (Map) *Is map area #1 west of the Jordan River? (For purposes of Syrian Auto Victory) Map is unclear.*

A: No, it’s east of the Jordan and west of the Khermon Stream.

Q: *HQ COMMAND STAFF Asset - it is not clear for me the rules 8.33 of the command Staff function:*

8.33 - mark any eligible un it (14.7) with the appropriate and available reserve marker it has no use because you can always place reserve marker with no restriction as for 14.07 ? or means you can place the command staff counter as an additional reserve marker?

A: The HQ Staff asset is useful to mark a unit as reserve if it's not your Player Turn!

Q: (Victory) *What happens at the end of turn 9 if neither side achieves a net VP's score of 6/4? Does the game end in a draw?*

A: The game ends in a Draw if the net is 0 after Turn 9, otherwise whichever side has the lead wins a Marginal Victory. The 6/4 is what is needed for a Decisive Victory.

Q: *The Mt. Hermon Garrison is an asset itself so according to the series rules only a single artillery asset can be assigned to a defending asset.*

However exclusive rule 14.16 says that only infantry class and air support assets can be assigned to this area so this rules out the use of artillery supporting the garrison.

However air support can be used in 'Artillery' mode (16.31 a. bullet 1).

So can an Israeli air asset be allocated to the defense of the Mt Hermon garrison as an artillery asset?

A: Yes Steve, an Air Support asset may be used in the artillery role!

It is unlikely that the attacking Syrians could send any battle assets in most cases. Remember that to commit assets the attacking units must be BOTH in supply AND be able to trace a valid supply path to a supply source at the instant of combat (6.22).

Units are always in supply on Mount Hermon (14.94), but it is not a valid Syrian Supply Source (14.91).

So if it was the airborne unit conducting the attack but, the Israeli's still control area 59, no assets could be added.

Q: *(Minefield) If a unit attempts to cross a minefield and fails its morale check, has it spent any movement points?*

A: Yes Aaron, it cost one additional movement point even if the attempt fails! E.g: A unit attempts to cross an open boundary with a field connection which has a minefield marker on it. This will cost the unit a total of 3 MP's - 2 MP's for the field connection and 1 MP for the attempt to cross the minefield!

Q: *If a normal Israeli unit is defending in a combat with a Strongpoint unit and the normal unit elects to retreat, may the evacuated Strongpoint asset be used to satisfy damage points and thus be placed in the Eliminated box rather than the Selection Cup?*

Or does Evacuation remove the SP replacement asset from being used to satisfy losses in combat?

Ex.: The Syrian attackers inflict 3 damage points on a 1-step Israeli armor unit and a SP w/ 1 damage point remaining. The Isr. armor unit retreats for 1 damage point, the Isr. armor unit is eliminated for 1 damage point. The SP is evacuated and replaced by an asset. May this asset be used to absorb the 1 remaining damage pt. or must it go into the Sel. Cup immediately? (Giving any Syrian armor an opportunity to exploit.)

A: Replacing the strongpoint with the battle asset happens only after all losses for the combat have been satisfied.

I'm aware that 15.5 says that "immediately" after a normal unit retreats, the strongpoint unit is replaced by the appropriate battle asset, but I can't believe that evacuation is supposed to interrupt the satisfying of losses, even though a strict reading would indicate so.

So I would play that the third hit would go to the strongpoint unit, and it would be eliminated without bringing in its battle asset. => Confirmed by the Designer and Rick Young to be correct on5/15/17.

Q: *At start of game, 7 areas have strongholds and Syrian units.*

Are these considered newly contested?

I.e.

1) have to have combat

2) do Israelis get opportunity to blow bridges (5.35d) assuming Syrians build one and then tried to cross it?

Edit: maybe this is not possible turn 1, 14.5 says only bridges for road connections over river boundaries can get blown bridge markers - do I read that right?

Edit #2: above question about river still holds, but I see now that Syrians don't have admin & movement phase in turn 1 so they can't build AT trench bridges yet

A: The 7 areas are considered newly contested AND they are also marked with an assault marker since the Syrians are conducting a crossing assault!

Edit: Bridges constructed over AT Ditches can never be blown!

Q: *(River Crossing Penalty) Let's assume the following:*

1) In the Operational Movement Phase a Syrian entity crosses the AT Ditch into an area occupied by the Israelis. A Crossing Assault is the consequence and a River Assault Marker is placed.

2) An Engineer Asset is assigned to the following battle by the Syrians and after the battle the AT Ditch is bridged by the Engineer.

3) In the Breakthrough Phase a further Syrian unit crosses the now bridged AT Ditch into the same area.

4) Due to the use of a special action an additional round of combat is fought.

My question is, do the penalties of the crossing assault apply to this additional round of combat as well? At least the additional Syrian entity now has crossed a bridged AT Ditch. Help appreciated.

A: River Assault markers are not removed until the end of the turn, so the breakthrough combat will have the river assault penalty. Yes, the Crossing Assault is in effect until the end of the turn!

Q: *Can Syrian Air Support Assets Be Placed in Israeli Assembly Areas for Interdiction?*

A: No, Israeli units in an assembly area may not be attacked and no Syrian assets/events may be placed there!

Q: *Does 8.21 mean that a supplied armor unit can move even if it previously moved during the op move or strat move phase?*

Seems like it does because the main restriction is to have not yet moved in this phase - this phase being breakthrough move phase.

Correct?

A: Correct, a unit can move as an exploitation marked unit using a special action in the Breakthrough Movement Phase, provided it has not yet moved this phase.

Q: (Mt. Hermon) *Can Syrians attack Mt Hermon with air support & paratroop w/o area 59?*

Seems like area 59 could be attacked via paratroop unit, but what assets could Syrians throw in if 59 is contested?

Can they bring in close air support?

What about artillery?

A: Area 59 is treated as all other areas, there are no special rules for this area except that it is the only area connected to Mount Hermon area [83].

Supply/Assets:

Q: *1. An asset defending by itself can use one artillery asset (only). Can a cut-off Mt. Hermon garrison use one? It doesn't need supply, being in Mt. Hermon, but can't trace a normal path either.*

2. Can an unsupplied Syrian unit that is attacked by an Israeli force using an Air Support asset use a SAM asset? I think the answer is no as the rules are written (since 16.12 just says that the usual sequence of play is overridden, not the supply requirements of 6.23), but I'm not sure. 3. Also, can Syrian units affected by 15.12 use a SAM asset?

A: 1) 14.94 deems Mt Hermon a Supply Source so it's always in supply and able to trace a Supply Path to it. Thing is only Infantry Battle Assets and Air Support Assets can be assigned to Mt Hermon (14.16), not Artillery Assets. So No.

2) Yes. The SAM Asset can attack as it's only limited by an area in the SAM zone being entered by an Israeli Air Support Asset. Logically, the defending unit land unit in the area would be irrelevant.

(Note to Rick and Michael: There's a small typo in rule 16.12: whenever an Israeli air supoort asset is placed in an area that is east of the Syrian SAM Barrier ..."

3) Yes. As Non Battle Assets defined in 16.1 (i.e. SAMs) can be assigned.

Q: *Well, 14.16 (and 14.94) says that *units* are in supply in Mt. Hermon, but 6.23 requires them to "trace a valid supply path" which isn't the same thing (the sequence of play means that units will from time to time still be in supply but not able to trace a path). But if artillery aren't allowed, it doesn't much matter.*

One related question this brings to mind, though. Does Mt. Hermon have to trace a supply path to count as a VP for the owning side? It is, after all, an area, not a unit, and thus not granted supply by 14.16.

Also, as far as SAMs being considered non-battle assets, I can't find anything that says that they are. Is that in the rules somewhere? I'm assuming that battle assets are those that have a step, but I can't find a clear definition.

A: Remember that a Supply Path per 9.31 is simply a path traced from a unit to a Supply Source. 14.94 deems Mt Hermon a "Special Supply Source".

Re SAMs as Non Battle Assets, the rule is actually in 15.12 which defines a Non Battle Asset as including 16.1 (SAMs)

Q: *By that logic, though, there's no difference between a Supply Source and a Special Supply Source. I interpreted "Special Supply Source" as needing to mean a supply source that ONLY acts as defined in 14.94 (providing supply to units in the same area) to avoid that logical problem.*

A: "By that logic, though, there's no difference between a Supply Source and a Special Supply Source." That's right! Except the Special Supply Source only applies to units in it.

"I interpreted "Special Supply Source" as needing to mean a supply source that ONLY acts as defined in 14.94 (providing supply to units in the same area) to avoid that logical problem." That's right too.

A force in Mt Hermon is always in supply because it can abstractly trace a Supply Path to Mt Hermon (14.94).

Equally an Israeli force in an Israeli Assembly Area (another type of Special Supply Source) is always in supply because it can abstractly trace a Supply Path to the Israeli Assembly Area it's in (14.95).

Mt. Hermon area is always in supply to any unit/asset occupying it! Whoever controls that area is awarded VP's in the Victory Check Phase.

Q: (Asset assignment based on supply) *1) Assume that an Israeli unit gets isolated during the Syrian Movement Phase. In the Israeli Movement Phase this unit moves to contest a Syrian area with Syrian units in it (this should be possible, since I understand that only Disordered units may not initiate an attack). Another (supplied) Israeli units is coming to help. As a result, the area will hold two Syrian units, and two Israeli units (one supplied, one unsupplied). May the Israeli Player assign artillery and other battle assets and events to the battle?*

2) Something that strikes me as odd is that the morale check for unsupplied units only needs to be done by the Phasing Player. Therefore, if a unit gets isolated during the Movement/Breakthrough Phase of the opposing player, the morale check only needs to be done in the following Supply Phase. However, if for some reason units get isolated in the Movement Phase of the Phasing Player, the moral check needs to be done immediately in the upcoming Supply Phase of the Phasing Player.

A: 1) Yes, you may assign assets, assuming the in-supply Israeli unit can trace a valid supply path at the instant of combat.

2) It is a time scale thing, how exactly are you isolating your units on your movement Phase? The only possible way I can think of is via para drop, and the rules say Para's do not have to check for supply on the turn they drop.

This way you get a turn to try to remedy the supply problem before needing to roll.
